Art Unit: 1648

This application contains claims directed to the following patentably distinct species in four genera:

(A) anti-HIV agent:

- (1) nonnucleoside RT inhibitors;
- (2) nucleoside RT inhibitors;
- (3) protease inhibitors;
- (4) integrase inhibitors;
- (5) viral protein antagonists;
- (6) capsid lockers;
- (7) antisense or ribozyme oligonucleotides;
- (8) decoys of TAR sequence and RRE;
- (9) soluble CD4;
- (10) Gag and Env protein mutants, fusion / viral entry inhibitors;

(B) order of addition of anti-HIV agent:

- (11) before the cell culture is contacted with the first HIV sample;
- (12) after the cell culture is contacted with the first HIV sample;

(C) first cell culture:

- (13) tumor cell;
- (14) PBMC;

(D) human cell naturally expressing cell surface co-receptors:

- (15) PBMC; and
- (16) HUT78

Art Unit: 1648

The species are independent or distinct because their structures, functions, and modes of action are different; thus, each represents a patentably distinct subject matter. Furthermore, the examination of these species would require different searches in the scientific literature, which would not be coextensive. As such, it would be burdensome to search these species together.

Applicant is required under 35 U.S.C. §121 to elect a single disclosed species from each genus for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 45 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1648

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103(a) of the other invention.
